

Datasheet

All-band High Precision GNSS Stacked Patch Antenna

Part No:
GPDF6010.A

Description:

Passive All-band High Precision GNSS Stacked Patch Antenna

Features:

Bands Covered:

- GPS (L1/L2/L5)
- IRNSS (L5)
- QZSS (L1/L2C/L5/L6)
- Galileo (E1/E5a/E5b/E6)
- GLONASS (G1/G2/G3)
- BeiDou (B1/B2a/B2b/B3)

Dual pin, dual feed, 4-pin configuration

Dimensions: D60 x 10mm

RoHS & Reach Compliant

1. Introduction

The Taoglas **GPDF6010.A** is an innovative high performance, multi-band passive high precision GNSS antenna that has been carefully designed to provide fantastic positional accuracy on the full GNSS spectrum. It covers GPS/QZSS L1/L2/L5/L6, GLONASS G1/G2/G3, Galileo E1/E5a/E5b, BeiDou B1/B2a/B2b/B3, NAVIC L5, as well as SBAS (WAAS/EGNOS/GAGAN/SDCM/SNAS) and L-band corrections.

Correct implementation of the GPDF6010.A allows the user to achieve higher location accuracy, as well as stability of position tracking in urban environments. The novel Terrablast circular stacked patch construction has excellent performance across the full bandwidth of the antenna while reducing weight by nearly 40% compared to other antenna options. Its unique design provides excellent polarization and phase performance, providing exceptional positional and timing accuracy.

Typical applications that benefit from high precision capabilities include:

- Autonomous Driving
- Unmanned Aerial Vehicles
- Precision Positioning for Robotics
- Precision Agriculture
- Timing Accuracy Synchronization

The GPDF6010.A is the latest embedded addition to Taoglas' product portfolio of high precision GNSS antennas. When used on the base and/or the rover as part of an RTK configuration, the GPDF6010.A can achieve genuine cm-level accuracy with proven results.

Full integration guidelines are contained in Section 6 of this datasheet including the Taoglas **HC125.A** hybrid coupler that will be required for use for dual pin feed patch integrations.

Contact your local Taoglas Customer Services team for more information on any of the products listed above or for support regarding integration.

2. Specifications

GNSS Frequency Bands Covered							
GPS	L1	L2	L5

5. Mechanical Drawing (Units: mm)

ISO NO.: EDW-21-8-0469

STATE: Released

NOTES: 1. All material must be RoHS compliant.
 2. Remove the hex nut from antenna before attaching the active board.
 Reinstall the nut and torque to 4 in-lbs (45 N-cm) MAX. before soldering the pins.

6. Antenna Integration Guide

6.1 Antenna Integration

The antenna should be placed at the center of a circular ground plane (PCB with ground plane) with a diameter of 80mm or larger. A larger diameter will increase the gain. All data in this datasheet was taken with a 100mm-diameter PCB. Maintaining a circular, symmetric ground plane shape and symmetric environment around the antenna is critical to maintaining the excellent axial ratio and phase center performance shown in this datasheet. The opposite side of the PCB from the antenna may be used for device electronics and does not need to maintain symmetry.

To install the antenna to the PCB, remove the nut supplied with the antenna, place the antenna onto the PCB, and reinstall the nut to the torque specified in the mechanical drawing. Then solder the pins according to the recommendations in the Soldering Recommendations section.

6.2 PCB Layout

The footprint and clearance on the PCB must comply with the antenna specification. The PCB layout shown in the diagram below demonstrates the antenna footprint.

Bottom Side

Top View

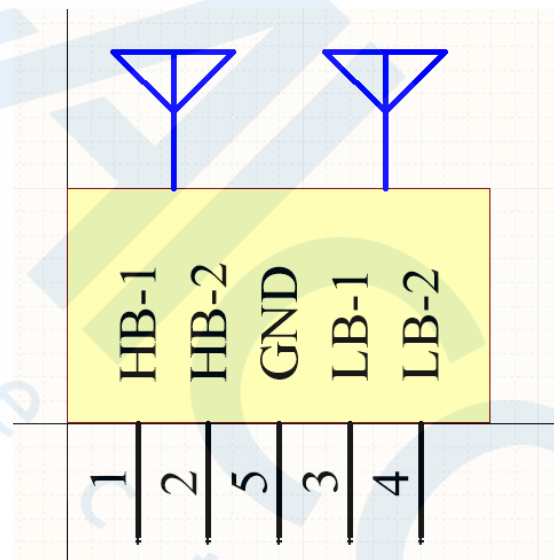

6.3 PCB Layout

6.4 Schematic Symbol and Pin Definitions

The circuit symbol for the antenna is shown below. The antenna has 4 pins and 1 mounting/grounding screw as indicated below. The HB pins represent the higher GNSS frequency bands at 1525 - 1610MHz and the LB pins represent the lower GNSS frequency bands at 1164 - 1300MHz, including L5, L2, B3, E5, and E6 bands. The screw must be grounded to the PCB ground plane using the supplied nut (or a similar M3 nut).

Pin	Description
1	HB-1 (-90°)
2	HB-2 (0°)
3	LBP1 (-90°)
4	LBP2 (0°)
5	GND (Mounting & Ground)

7. Evaluation Board Matching Circuit

Each patch element uses two orthogonal feeds that need to be combined in a hybrid coupler to ensure optimal axial ratio. Taoglas recommends our **HC125.A**, a high-performance hybrid coupler specifically engineered for use with our multi feed patches.

Two HC125.A's are required for this antenna, one for the high GNSS band of operation (1525-1610MHz) and another for the low GNSS band (1164MHz – 1300MHz). These hybrid couplers should be placed close to the antenna pins and terminated correctly using 2x 100-ohm resistors in parallel or a single 49.9 or 50-ohm resistor.

The high-band pins require a series capacitor for impedance matching. A 4.7pF high-Q capacitor is recommended, such as the Murata GJM1555C1H4R7BB01D.

The output of each of the hybrid couplers can feed into separate paths for high and low band GNSS filtering and amplification.

Matching Components

Designator	Type	Value	Description
R1, R2	Resistor (0402)	49.9Ω (1%)	Yageo RC0402FR-0749R9L
X1, X2	HC125.A Hybrid Coupler		Taoglas HC125.A
C1, C2	Capacitor (0402)	4.7pF (+/- 0.1pF)	Murata GJM1555C1H4R7BB01D
ANT1	Antenna		Taoglas GPDPF6010.A

8. Packaging

8.1 Automated Ferrochrome Soldering Machine

Soldering Temperature: 360-380°C

Soldering Duration: 3~4 seconds

8.2 Automated Ferrochrome Soldering Machine

Soldering Temperature: 360-380°C

Soldering Duration: 3~4 seconds

Please note that this process will require a one-time fixture to be made for each PCB design.

9. Packaging

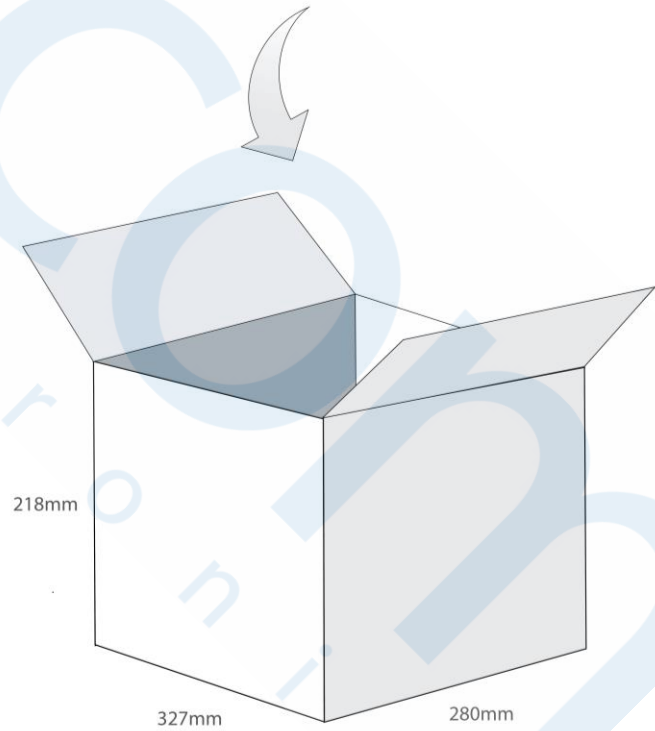

24 pcs GPDF6010A
per PE Bag
Weight - 1100g

24 pcs GPDF6010A per Carton
Carton Dimensions - 263 x 154 x 96mm
Weight - 1200g

96 pcs GPDF6010A per Carton
Carton Dimensions - 327 x 280 x 218mm
Weight - 5Kg
